CYBER LAWS AND FORENSICS

Module-wise Question Bank — Modules 1 to 5

Answer length: Prepare 4-mark answers for about 2 handwritten pages and 8-mark answers for about 3–4 handwritten pages.

Module 5 note: Separate Module 5 notes were not found among the uploaded files. Module 5 questions below are provisional and based only on the stated course outcomes about evidence gathering/preservation, forensic reports, ethics and expert witnesses. Please verify them against your official Module 5 notes.

MODULE 1 — Cyber Laws, Cyberspace & Intellectual Property

Based on Module 1 notes, the Question Bank and Series Test-I.

4-Mark Questions

1. State the primary objective of cyber laws.
2. Give two examples of copyright violation on the internet.
3. How does typosquatting deceive an ordinary internet user? Give an example.
4. Explain how framing differs from normal hyperlinking.
5. Who qualifies as an Internet Service Provider (ISP), and what services may an ISP provide?
6. Define cyberspace and mention its key components.
7. State the importance of protecting copyright in cyberspace.
8. Explain any four methods used to protect copyright online.
9. Explain patent protection in India with reference to Sections 3(k), 39 and 10, as covered in the notes.
10. Write a short note on the historical development of cyber laws.

8-Mark Questions

1. Explain the importance of cyber laws. Give three reasons why traditional penal laws failed to address cybercrimes.
2. Detail the mechanisms through which copyright is commonly infringed online today.
3. Trace the historical perspective that led to the enactment of cyber laws globally.
4. Describe the role of an ISP in cyberspace and explain the protection of patents in India.
5. Explain cybersquatting and its types, including typosquatting, name jacking, brand jacking and combo squatting.
6. Discuss the challenges of protecting copyright in cyberspace and explain the methods of protection mentioned in the notes.
7. Explain how cyber laws protect users, organizations and governments from online threats.

MODULE 2 — IT Act 2000 & Punishments

Prioritize IT Act objectives, Section 79, intermediary offences, cyber terrorism, protected systems, privacy and punishments.

4-Mark Questions

1. State the primary objective behind the enactment of the Information Technology Act, 2000 in India.
2. What are the essential legal requirements for an intermediary to claim exemption from liability under Section 79?
3. Explain offences by intermediaries.
4. What constitutes misrepresentation under Section 71 of the IT Act?
5. How does the IT Act punish an attempt to commit offences under Section 84C, according to the notes?
6. Describe the punishment for violation of privacy and breach of confidentiality.
7. What is a protected system under Section 70?
8. Write a short note on the 2008 amendment to the IT Act.

9. List the offences covered by Sections 43, 65, 66, 66B–66E, 66F and 67, as shown in the notes.

8-Mark Questions

1. Define cybercrime under the IT Act and classify the various types of offences occurring in cyberspace.

2. Explain the statutory definition, essential ingredients and punishment prescribed for cyber terrorism under Section 66F of the IT Act.

3. Explain the provisions, unauthorized-access penalties and government powers associated with a protected system under Section 70.

4. Discuss privacy and confidentiality, focusing on Sections 66E, 72 and 72A as covered in the notes.

5. Explain the objectives, major provisions and amendments of the Information Technology Act, 2000.

6. Explain Section 79 and the requirements an intermediary must meet to claim exemption from liability.

7. Prepare a table of important offences and punishments under the sections listed in Module 2.

MODULE 3 — Computer Crimes, Company Policy Violations & Evidence

Use the crime categories and examples in Module 3. Define each type and give an example from the notes.

4-Mark Questions

1. Define computer crime.

2. Explain the categories of computer crime: computer as a target, computer as an instrument, and crimes associated with the prevalence of computers.

3. Write short notes on phishing, cracking, cyberbullying and cybersquatting.

4. Define malware and explain how it can harm a computer or steal information.

5. Explain data theft, identity theft, fraud and unauthorized access.

6. What is a company policy violation in cybersecurity?

7. List common types of company policy violations.

8. State the consequences of company policy violations.

9. Define chain of custody in digital evidence handling.

10. List the core steps in securing digital evidence.

8-Mark Questions

1. Explain the major categories of computer crimes and give suitable examples from the notes.

2. Classify and explain common cybercrimes, including phishing, ransomware, spoofing, typosquatting, data theft, fraud, malware and unauthorized access.

3. Explain company policy violations, their common types and their consequences.

4. Describe the process of preparing a case for cybersecurity investment.

5. Explain the steps involved in preparing a case for a cyber incident.

6. Describe the core process of securing digital evidence: identification, preservation, collection, analysis and documentation.

7. Explain the key principles of securing evidence, including forensic imaging, preserving originals, chain of custody, documentation and secure storage.

8. Describe industrial espionage investigation and the detection and monitoring steps covered in the notes.

MODULE 4 — Digital Data, Storage Systems & Boot Process

Based on the uploaded Module 4 notes, including digital data, storage devices, boot sequence, disk drives, SSDs and file systems.

4-Mark Questions

1. Define digital data and data storage.

2. Differentiate file storage, block storage and object storage.
3. State the importance of data integrity, data security and data accessibility.
4. List five types of storage devices.
5. Define the boot sequence.
6. List the steps in the boot sequence in the correct order.
7. Explain the main components of an HDD.
8. Define an SSD and list its advantages.
9. Write a short note on FAT32.
10. Write a short note on NTFS.

8-Mark Questions

1. Explain digital data storage and discuss file, block and object storage.
2. Describe the types of storage devices, including HDDs, SSDs, cloud storage, optical storage and magnetic tape.
3. Explain the boot sequence from power-on to user login.
4. Describe the structure and working of an HDD, including platters, tracks, sectors, actuator arm and read/write head.
5. Explain SSDs, their advantages and the types listed in the notes.
6. Compare FAT32 and NTFS in terms of strengths, limitations and use cases.
7. Explain NTFS and ReFS and describe their intended uses, based on the Module 4 notes.

MODULE 5 — Digital Forensics Reporting, Ethics & Expert Witness

PROVISIONAL: These questions use only the course outcomes supplied in your CLAF material. No separate Module 5 notes were found in the uploaded files.

4-Mark Questions

1. What is digital evidence?

2. Why should collected digital evidence be preserved carefully?

3. List the main details that should be recorded when documenting an incident or evidence.

4. What is a forensic report?

5. State the importance of preparing a clear forensic report.

6. What is meant by ethics in digital forensics?

7. Who is an expert witness?

8. Why is proper documentation important in digital forensics?

8-Mark Questions

1. Explain the process of gathering and preserving digital evidence, referring to the evidence-handling principles in the supplied course material.

2. Describe the preparation of a digital forensic report using tools and manually, based on the topics specified in the course outcomes.

3. Explain the importance of forensic reporting and the need to present findings clearly and understandably.

4. Discuss ethics and the code of conduct expected of an expert witness in digital forensics.

5. Explain how evidence documentation and preservation support a forensic investigation and the presentation of findings.

Highest-priority revision

First prepare: (1) importance of cyber laws and why traditional penal laws failed, (2) copyright infringement mechanisms, (3) cybercrime classification, (4) IT Act objectives and key punishments, (5) Section 79 and intermediary offences, (6) Section 66F cyber terrorism, and (7) securing digital evidence. These match the supplied Series Test-I paper and Question Bank. This question bank is a preparation aid, not a prediction of the exact exam paper.
